

STATEMENT OF WORK

Orion Analytics Platform -- Enterprise Deployment

Customer:	Meridian Financial, Inc.
Customer ID:	CUST-0287
Contract Term:	24 months (2024-07-01 through 2026-06-30)
Renewal Date:	2026-06-30
Account Owner (Orion):	David Park, Forward Deployed Engineer
Account Exec (Meridian):	Sarah Chen, CTO
Total Contract Value:	\$480,000 annual / \$960,000 total
Billing Cadence:	Monthly invoice, NET-30

1. Executive Summary

This Statement of Work (SOW) governs the enterprise deployment of the Orion Analytics Platform for Meridian Financial, Inc. Orion provides real-time transaction analytics, customer segmentation, and regulatory reporting workflows. This agreement supersedes the pilot agreement signed 2024-02-15.

Meridian operates across 14 U.S. states with approximately 2.4 million active customers. The platform will ingest transaction events from three upstream systems (Plaid, Stripe, and Meridian's internal ledger) at a projected peak throughput of 8,000 events per second.

2. Service Level Agreements

Orion commits to the following availability and response SLAs. Credits accrue against the next invoice per Section 8 if thresholds are missed.

2.1 Availability

Uptime target: 99.9% monthly measured against the control plane and API surface. Scheduled maintenance windows (Sundays 02:00-04:00 UTC) are excluded from measurement.

2.2 Incident Response

Priority	Definition	First Response	Resolution
P0	Complete outage, data loss, security breach	30 minutes	4 hours
P1	Major functionality broken, no workaround	2 hours	1 business day
P2	Functionality degraded, workaround exists	8 business hours	5 business days
P3	Minor issue, feature request, cosmetic	2 business days	Best effort

All P0 incidents trigger an automated page to the on-call engineer assigned to Meridian's account. The on-call engineer must acknowledge the page within 30 minutes and begin active investigation. Every page

notification includes the incident ID, the affected service, and the time the threshold was breached.

The P0 escalation chain uses explicit time thresholds measured from incident declaration: T+0 -- the on-call engineer is paged immediately upon incident declaration and must acknowledge within 30 minutes; T+15 -- if unacknowledged within 15 minutes of the initial page, the team lead is automatically notified; T+30 -- if the incident remains open 30 minutes from the original incident start, VP Engineering is notified directly; T+60 -- at 60 minutes from incident start the executive sponsor (Sarah Chen, CTO) is briefed by VP Engineering regardless of acknowledgment status. This chain applies to all P0 incidents and to any P1 that breaches the 2-hour first-response SLA.

2.3 Service Credits

Monthly uptime below 99.9% but at or above 99.0%: 10% credit of that month's fees. Below 99.0% but at or above 95.0%: 25% credit. Below 95.0%: 50% credit. Credits are capped at 50% of any single month's fees and applied to the following invoice.

3. Deployment Configuration

3.1 Hosting and Region

Primary region: us-east-2 (Ohio). Secondary region for disaster recovery: us-west-2 (Oregon). All workloads run across three availability zones in the primary region. Data residency: all customer data remains within U.S. territory per Meridian's compliance posture (SOC 2 Type II, PCI DSS Level 1).

3.2 Retrieval Engine Configuration

The Orion knowledge retrieval subsystem is configured with the following defaults for Meridian's tenant:

Parameter	Default Value	Tuning Range
Retrieval top-k	k = 2	1 - 10
Chunk size / overlap	1000 / 200 characters	500-2000 / 50-400
Embedding model	nomic-ai/nomic-embed-text-v1.5	Managed by Orion
Reranker	Disabled by default	Available on Enterprise
Hybrid search (BM25)	Enabled	Boolean toggle
Query timeout	8 seconds	2 - 30 seconds

3.3 Backup and Disaster Recovery

Automated snapshots are taken every 24 hours and replicated to us-east-2 across 3 availability zones. A weekly cross-region snapshot is retained for 90 days in us-west-2. RTO: 4 hours. RPO: 24 hours. Restore drills are conducted quarterly on behalf of the customer.

4. Data Sources and Integrations

4.1 Upstream Systems

- Plaid -- transaction feed via webhooks, event schema v3.2.1
- Stripe -- payment events via the API, using API version 2024-04-10
- Internal ledger -- nightly batch export via SFTP, pipe-delimited format

4.2 Downstream Integrations

Reports and scored segments are delivered to:

- Meridian's Snowflake warehouse (EXTERNAL_STAGE:ORION_EXPORT) -- hourly
- Salesforce (Customer_360 object) -- via the Orion-Salesforce connector v2.4.1
- Regulatory reporting pipeline -- daily 06:00 UTC
- Slack (#orion-alerts channel) -- real-time P0/P1 notifications

4.3 Known Integration Constraints

The Salesforce connector v2.4.1 has a documented limitation on bulk object updates above 50,000 records per hour. Meridian's expected volume is ~12,000 records per hour, within limits. If this threshold is approached, Meridian should engage their Orion FDE to plan migration to the v3.x connector (available Q1 2025).

5. Pricing and Commercial Terms

5.1 Platform Fee

Base platform fee: \$28,000 per month (Enterprise tier). Includes 5 named admin users, 50 analyst seats, unlimited read-only access, and up to 200 million events ingested per month.

5.2 Overage and Usage

Events above 200M/month: \$0.08 per 10,000 events. Additional analyst seats beyond 50: \$180 per seat per month. Additional regions (beyond the contracted us-east-2 + us-west-2): \$4,000 per region per month.

5.3 Professional Services

Onboarding and initial integration: \$60,000 fixed-price, completed Q3 2024. Ongoing FDE support: 20 hours per month included, \$280 per hour thereafter. Custom connector development: quoted per SOW amendment.

5.4 Renewal

Agreement renews automatically for successive 12-month terms unless either party provides 90 days written notice prior to the renewal date. Notice must be delivered in writing to the account executive named on this SOW.

Pricing at renewal will increase by the lesser of CPI (U.S. Consumer Price Index, 12-month trailing) or 5%, assessed at the renewal anniversary and applied to the base platform fee only. Overage rates, professional services rates, and per-seat pricing are not subject to the automatic increase and will be renegotiated at renewal if either party requests a change.

6. Security, Privacy, and Compliance

6.1 Certifications

Orion maintains SOC 2 Type II (annual audit, most recent: 2024-05-22), ISO 27001:2022, PCI DSS Level 1 (as a service provider), and HIPAA compliance posture. Attestation reports are available to Meridian under NDA.

6.2 Encryption

Data at rest is encrypted using AES-256 with AWS KMS customer-managed keys (CMKs) scoped to Meridian's tenant. CMKs are rotated automatically on an annual schedule; manual rotation is available via the admin console in five steps and takes effect within 15 minutes of confirmation. Field-level encryption is applied to all fields tagged as PII in Meridian's data classification schema, using envelope encryption so that individual field keys can be revoked without re-encrypting the full dataset. Data in transit is protected by TLS 1.3 with enforced Perfect Forward Secrecy (PFS) cipher suites; TLS 1.2 and below are rejected at the API gateway.

6.3 Access Control

SSO via SAML 2.0 integrated with Meridian's Okta tenant. MFA enforced for all admin actions. Session timeout: 30 minutes idle. All admin actions are logged to the audit trail and retained for 7 years.

6.4 Incident Disclosure

Security incidents affecting Meridian data are disclosed within 24 hours of confirmation, in accordance with Section 7 of the Master Services Agreement and applicable regulatory requirements (GLBA, state breach notification laws).

6.5 Audit Log Policy

The Orion platform maintains an immutable audit log of all actions that modify system state or access customer data. Actions logged include: all admin console actions, API key creation and revocation, data export requests, configuration changes to retrieval parameters, user provisioning and deprovisioning, and all authentication events including SSO assertions and MFA challenges.

Access to the audit log is restricted to users with the admin-role permission assigned in Meridian's Okta tenant. Audit logs are retained for 7 years in immutable storage and cannot be deleted or modified by any user, including Orion staff, without a formal legal hold process. Export is available as CSV via the admin console under Audit > Export, or programmatically as JSON via the `/v2/audit` API endpoint with an admin-scoped API key.

7. Incident Management and Post-Incident Review

7.1 Incident Classification

All incidents are classified at creation time based on customer impact. The classification determines the response SLA, escalation chain, and post-incident review requirements. P0 incidents (complete outage, data loss, or security breach affecting customer data) require a post-incident review document delivered to

the customer within 5 business days of resolution. The document must cover: incident timeline, root cause analysis, immediate remediation steps taken, and preventive measures implemented to prevent recurrence. P1 incidents (major functionality impaired, no adequate workaround) require a summary email to the customer primary contact within 2 business days of resolution. P2 and P3 incidents are documented in the ticket system but do not require customer-facing post-incident communications unless the customer specifically requests one.

7.2 Post-Incident Review Requirements

Post-incident reviews for P0 incidents must include five required sections: (1) timeline with timestamps accurate to the minute, covering detection, acknowledgment, first customer notification, mitigation, and resolution; (2) root cause analysis using a 5-Why methodology to trace the proximate cause to its systemic origin; (3) customer impact statement quantifying the number of affected users, the duration of impact, and any financial or compliance consequences; (4) immediate remediation steps taken during the incident window to restore service; (5) preventive measures implemented after resolution, with the name of the owner, the implementation date, and a verification step confirming the measure is in place. Reviews are delivered via email to the customer CTO and primary technical contact. For Meridian, this means Sarah Chen and Mike Rodriguez.

7.3 Service Credit Calculation

Service credits for SLA breaches are calculated as follows. Monthly uptime is measured as the percentage of minutes in the calendar month during which the Orion control plane and API surface return successful responses for at least 95% of requests. Scheduled maintenance windows (Sundays 02:00-04:00 UTC) are excluded from the calculation. If monthly uptime falls below 99.9% but remains at or above 99.0%, a credit of 10% of that month's base platform fee is applied to the following invoice. Below 99.0% but at or above 95.0% earns a 25% credit. Below 95.0% earns a 50% credit. Credits are capped at 50% of any single month's fees and do not carry over. Credits are applied automatically -- Meridian does not need to submit a credit request. The monthly uptime calculation is available in the admin console under Account > SLA Report.

7.4 Escalation Contacts

Orion FDE (primary):	David Park -- david.park@orion.io
Orion CS (account):	Elena Martinez -- elena.martinez@orion.io
Orion On-Call (P0):	pagerduty.orion.io/meridian (24x7)
Orion VP Engineering:	On-call escalation at T+30 per SLA 2.2
Meridian CTO:	Sarah Chen -- sarah.chen@meridian.com
Meridian Tech Lead:	Mike Rodriguez -- mike.rodriguez@meridian.com

8. Data Governance and Privacy

8.1 Data Classification

Meridian's data processed by Orion is classified into three tiers. Tier 1 (PII and Financial): includes customer names, account numbers, transaction amounts, and any field tagged as PII in Meridian's data

classification schema. Tier 1 data is subject to field-level encryption, strict access controls, and audit logging for every read event. Tier 2 (Aggregated Analytics): includes scored segments, behavioral clusters, and aggregated transaction metrics where individual records cannot be reconstructed. Tier 2 data is encrypted at rest but does not require field-level encryption. Tier 3 (Operational Metadata): includes system logs, performance metrics, and configuration state. Tier 3 data is retained for 90 days and is not subject to the 7-year retention requirement that applies to audit logs.

8.2 Data Residency

All Meridian customer data is stored exclusively within United States territory. Primary storage is in AWS us-east-2 (Ohio). Disaster recovery storage is in AWS us-west-2 (Oregon). Cross-region replication for DR purposes is encrypted in transit using TLS 1.3. No Meridian customer data is transferred to or processed in any region outside the United States without written consent from Meridian's CTO. This posture satisfies Meridian's current compliance requirements under Gramm-Leach-Bliley Act (GLBA), PCI DSS Level 1, and SOC 2 Type II. When the eu-west-2 region is provisioned for the UK subsidiary, a separate data residency agreement will be required to govern data flows between US and EU regions, specifically to address UK GDPR and EU GDPR requirements. Orion's legal team will engage Meridian's legal team at least 60 days before the eu-west-2 provisioning date to finalize this agreement.

8.3 Retention and Deletion

Customer data retained by Orion is subject to the following retention schedule. Transaction event data (raw ingested events): retained for 24 months from ingestion date, then deleted from primary storage. Aggregate analytics output (scored segments, cluster assignments): retained for the duration of the contract plus 90 days, then deleted unless Meridian requests an extended hold. Audit log entries: retained for 7 years in immutable storage per SOW Section 6.5. Backup snapshots: daily snapshots retained for 90 days; weekly cross-region snapshots retained for 12 months. Upon contract termination, Orion will provide Meridian with a data export package containing all Tier 1 and Tier 2 data in Parquet format within 30 days of the termination date. All Meridian data will be securely deleted from Orion's systems within 60 days of the export delivery, with a deletion certificate provided to Meridian upon request.

8.4 Right to Audit

Meridian has the right to audit Orion's compliance with this SOW and its data handling obligations once per calendar year, with 30 days written notice. Audits may be conducted by Meridian's internal audit team or by a third-party auditor agreed upon by both parties. Orion will provide the auditor with access to relevant system logs, configuration records, and security documentation. Orion's SOC 2 Type II report (most recent: 2024-05-22) is available to Meridian under NDA and may satisfy audit requirements without requiring a separate on-site audit. If the audit reveals a material breach of Orion's obligations, Meridian may engage the dispute resolution process described in Section 9 of the Master Services Agreement.

9. Appendix A -- Pricing Schedule

A.1 Full Pricing Table

Item	Unit	Price
Base platform fee (Enterprise)	Per month	\$28,000

Analyst seat (over 50)	Per seat per month	\$180
Additional region	Per region per month	\$4,000
Overage events (over 200M/mo)	Per 10,000 events	\$0.08
FDE hours (over 20/mo included)	Per hour	\$280
Custom connector development	Per SOW amendment	Quoted
Onboarding (one-time, complete)	Fixed price	\$60,000

A.2 Example Expansion Scenarios

Scenario 1 -- Seat expansion only (25 additional seats): base fee \$28,000 + 25 seats at \$180/seat = \$4,500 in additional seat fees = \$32,500 per month total. Annualized: \$390,000. Scenario 2 -- EU region only (no additional seats): base fee \$28,000 + eu-west-2 region at \$4,000/month = \$32,000 per month total. Annualized: \$384,000. Scenario 3 -- Full expansion (25 additional seats plus EU region): base fee \$28,000 + seat fees \$4,500 + region fee \$4,000 = \$36,500 per month total. Annualized: \$438,000. Scenario 4 -- Maximum expansion (30 additional seats plus EU region): \$28,000 + \$5,400 + \$4,000 = \$37,400 per month total. All scenarios assume no event overage and no additional professional services hours beyond the 20 included per month.

A.3 Renewal Pricing Mechanism

At each 12-month renewal, the base platform fee is adjusted by the lesser of the U.S. Consumer Price Index (12-month trailing, all urban consumers, not seasonally adjusted, as published by the U.S. Bureau of Labor Statistics at the renewal anniversary) or 5%, whichever is smaller. The adjustment applies to the base platform fee only -- it does not apply to per-seat overage pricing (\$180/seat), per-region pricing (\$4,000/region), event overage rates (\$0.08 per 10,000), or professional services rates (\$280/hour). Those rates are fixed for the initial contract term and will be renegotiated separately at renewal if either party requests a change. The renewal adjustment is calculated and invoiced automatically; Meridian does not need to take any action. The renewal invoice will include a line item showing the CPI index value used and the resulting adjustment amount.
